PROFESSIONAL SUMMARY

MCA graduate with hands-on skills in both **cybersecurity operations** and **full stack development**. Practised in **SIEM monitoring, log analysis, threat detection and incident response** using Splunk, Wazuh, Osquery and Microsoft Defender, applying the **MITRE ATT&CK** framework and **Cyber Kill Chain**; Cisco-certified in Endpoint Security. As a developer, **built and shipped a live Android app (OneGoX) on the Google Play Store** using Flutter, and works with React.js, Node.js, Supabase, MongoDB and SQL. Uses Python, n8n and AI tools (Claude, Codex, Ollama) to automate work. Available to join immediately in a SOC Analyst or Full Stack Developer role.

TECHNICAL SKILLS

SIEM & Security Tools	Splunk, Wazuh, Microsoft Defender for Endpoint (EDR), Osquery, Wireshark
Security Operations	Alert Triage, Log Analysis, Threat Detection, Incident Response, IOC Analysis, Static Malware Analysis
Frameworks	MITRE ATT&CK, Cyber Kill Chain, Security Monitoring Practices
Systems & Networking	TCP/IP & Networking Fundamentals, Windows Security & Event Logs, Virtual Machine Labs
Frontend & Mobile	Flutter, Dart, React.js, JavaScript, HTML, CSS, Bootstrap
Backend & Database	Node.js, Supabase, MongoDB, SQL
AI & Automation	Claude, Codex, Ollama (local LLMs), n8n (workflow automation)
Languages & Tools	Python, Dart, JavaScript, Git, GitHub

PROJECTS

OneGoX – Marketplace Mobile App **(Live on Google Play)** *Flutter | Dart*

- Designed, built and published **OneGoX**, a buyer–seller marketplace Android app now live on the Google Play Store.
- Built real-time **buyer–seller chat** with image and video sharing for smooth communication between users.
- Added **voice search** for products and **voice message translation** that plays speech back in the recipient's language.
- Owned the full release cycle: UI, features, testing and Play Store deployment.

Windows Binary Threat Analysis Using Static Techniques *Python | Security Research*

- Performed static analysis of Windows executables to classify files as **malicious or benign** based on indicators of compromise (IOCs).
- Researched **Living-off-the-Land Binaries (LOLBins)**, mapping attacker techniques to MITRE ATT&CK and documenting detection strategies.
- Automated parts of the analysis workflow with **Python** for faster, more consistent threat classification.

INTERNSHIP EXPERIENCE

Web Development Intern — JCS Infotech *Aug 2025 – Sep 2025*

- Rated **"Excellent"** in the final performance evaluation for delivering all assigned frontend tasks.
- Developed and structured responsive, user-friendly web pages using HTML, CSS and JavaScript.
- Worked with the technical head to gather requirements and optimise web page performance.

CERTIFICATIONS

Endpoint Security — Cisco Networking Academy *May 2026*

- Evaluated endpoint security posture and analysed malware extracted from packet captures (PCAPs).

Practical Security Investigation with Splunk, Wazuh and Osquery — Udemy

- Hands-on log analysis and security monitoring: identifying suspicious activity and interpreting security event patterns.

EDUCATION

Master of Computer Applications (MCA) *2024 – 2026*

Anna University (Udaya School of Engineering) | CGPA: 8.0

B.Sc. Physical Education — Manonmaniam Sundaranar University *2021 – 2024*

CGPA: 7.70
